

Identity and Access Management

Executive summary

Improve identity and access management

Everyday we see news headlines about organisations that have experienced a security breach, data loss or compliance violation. Their reputation, share price, revenue and customers all suffer negatively in the aftermath. BT can help prevent this happening to you. We can help protect your organisation and reputation, using recognised government and military-grade security that is both cost-effective and compliant.

Protect your organisation with managed services

Let BT help you protect your digital assets and enable auditable control over the ever-growing number of devices accessing your organisation's networks – laptops, mobiles and personal digital assistants (PDAs).

Our security experts will assess your existing identity and access management infrastructure. They will also determine which processes, policies, technologies and working practices will help you attain your organisation's objectives, while delivering the greatest return on investment.

BT's Identity and Access Management solutions include our industry-recognised consultancy, professional services and a range of managed services. We will work with you to determine the appropriate mix and delivery method for strong authentication, federation, logical access integration, PKI and single sign on (SSO). Our Managed Services options enable rapid deployment, enhance organisational productivity, simplify administration and reduce costs.

Operate and comply cost-effectively

BT has been successfully implementing and managing flexible Identity and Access Management solutions for more than a decade. We have delivered these benefits to global organisations, including AXA, La Poste, Toyota and the UK's Ministry of Defence (MoD):

- **Secure access:** One of the longest-running PKI deployments, SettleNet, linking financial institutions with CREST for UK multi-currency settlements.
- **Cost-effective compliance:** grant and administer roles and access to sensitive online systems to comply with government and industry regulations.
- **Improved organisational agility:** deliver users easy, secure and appropriately authorised access to your systems and data to boost productivity.
- **Lower operational costs:** more efficient application and data access for users reduces helpdesk costs for routine tasks, such as password resets.

Contact your BT Account Manager to see how Identity and Access Management solutions can create secure and cost-effective processes for your organisation.
