Data

Access to up to date information, whenever you need it is vital. DFTS offers a range of fully managed services to provide users with access to information, simply and securely.

RESTRICTED LAN Interconnect (RLI)

The RESTRICTED LAN interconnect (RLI) service provides a platform for secure communications and information exchange up to and including RESTRICTED level. It connects users on a CESA accredited secure private network. The RLI provides the backbone to support flexible working practices.

RESTRICTED LAN Interconnect Remote Access (RLI RA)

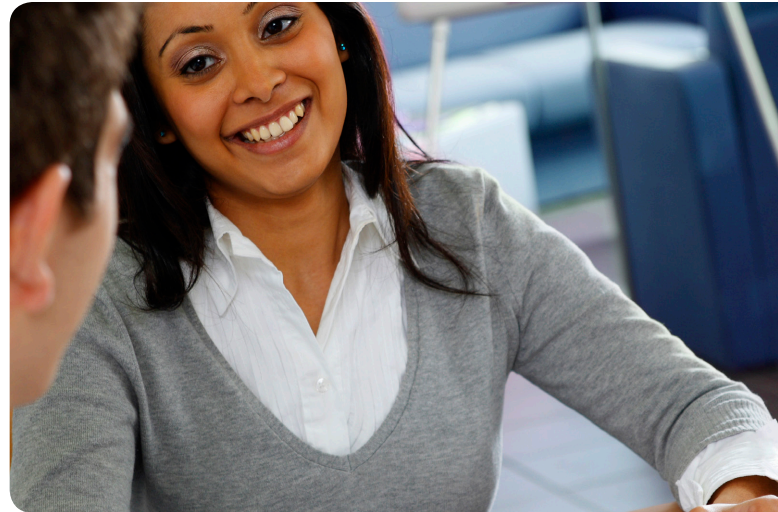

The RESTRICTED LAN Interconnect Remote Access (RLI RA) service allows personnel to access, share and update information up to RESTRICTED classification from any UK or overseas location.

Access to RLI RA is flexible. It's available while mobile using 3G or dial-up, and at home using MOD broadband or ISDN. MOD users and Industry Partners of MOD can use RLI RA to access e-mail, internet and shared information with confidence since it's built in accordance with Communications Electronic Security Group (CESG) and MOD Security (MODSy) guidelines.

The RLI RA service helps users work more flexibly. It helps reduce the need for travel, makes time away from the office productive, and helps personnel make informed decisions using the very latest information.

SECRET LAN Interconnect (SLI)

Available as a permanent connection or dial-up service from a fixed location, SECRET LAN Interconnect (SLI) is a fully managed network that allows the secure exchange of data that is protectively marked as SECRET.

The Enterprise Gateway Service (EGS)

The DFTS Enterprise Gateway Service (EGS) is the only MOD approved means of accessing the Internet whilst connected to the RESTRICTED LAN Interconnect (RLI). EGS enables subscribers to browse the internet and exchange Unclassified email from a RESTRICTED desktop to other any other users. It means that RLI users can have the benefit of a RESTRICTED system but also the flexibility to access information from other, untrusted sources.

Ordering is simple. Your Authorised Telecommunications Officer (ATO) can place an order on your behalf using the online DFTS Catalogue of Services, and the codes below.

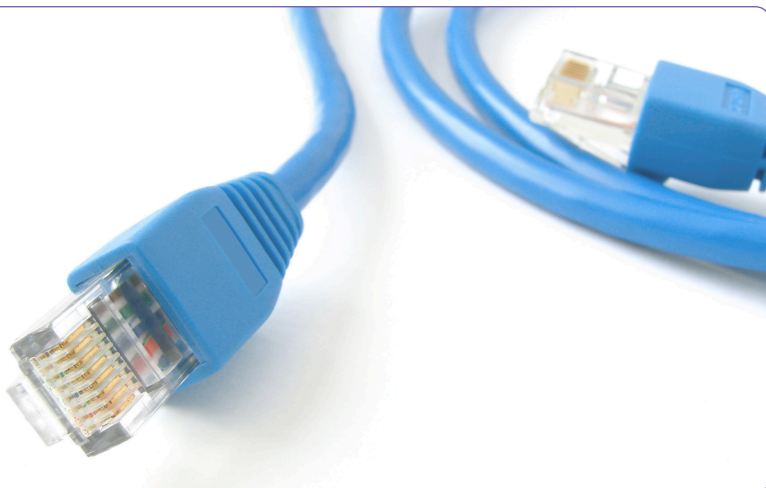

Service codes

All DFTS services codes begin with two letters which are standard to that specific service. They are followed by four letters/numbers which identify the variant of service you wish to order. Exact service codes can be found in the DFTS Catalogue of Services.

RLI codes are: LR followed by XXXX

RLI RA codes are: LR followed by XXXX

SLI codes are: LS followed by XXXX

The Defence Fixed Telecommunications Service (DFTS) is delivered by BT on behalf of MOD and delivers proven value for money under a single supplier agreement. BT, as an established supplier and innovative provider of ICT infrastructure, works with ISS Networks to deliver flexible, secure and seamless communications to the UK Armed Forces. Other Government Departments (OGDs) and Defence industry partners can sign up to DFTS services through a DFTS Catalogue Access Agreement (CAA) or Memorandum of Agreement (MoA).

The services described in this publication are subject to availability and may be modified from time to time.
