Delivering seamless access to major 3rd party cloud computing partners

The financial markets industry is highly demanding. Financial services organisations need secure, flexible and highly scalable compute resources regardless of geographic location.

BT Radianz offers connectivity to multiple cloud providers. If you're an existing customer, you can take advantage of your existing Radianz connection and consume public cloud resources through your nearest secure access point.
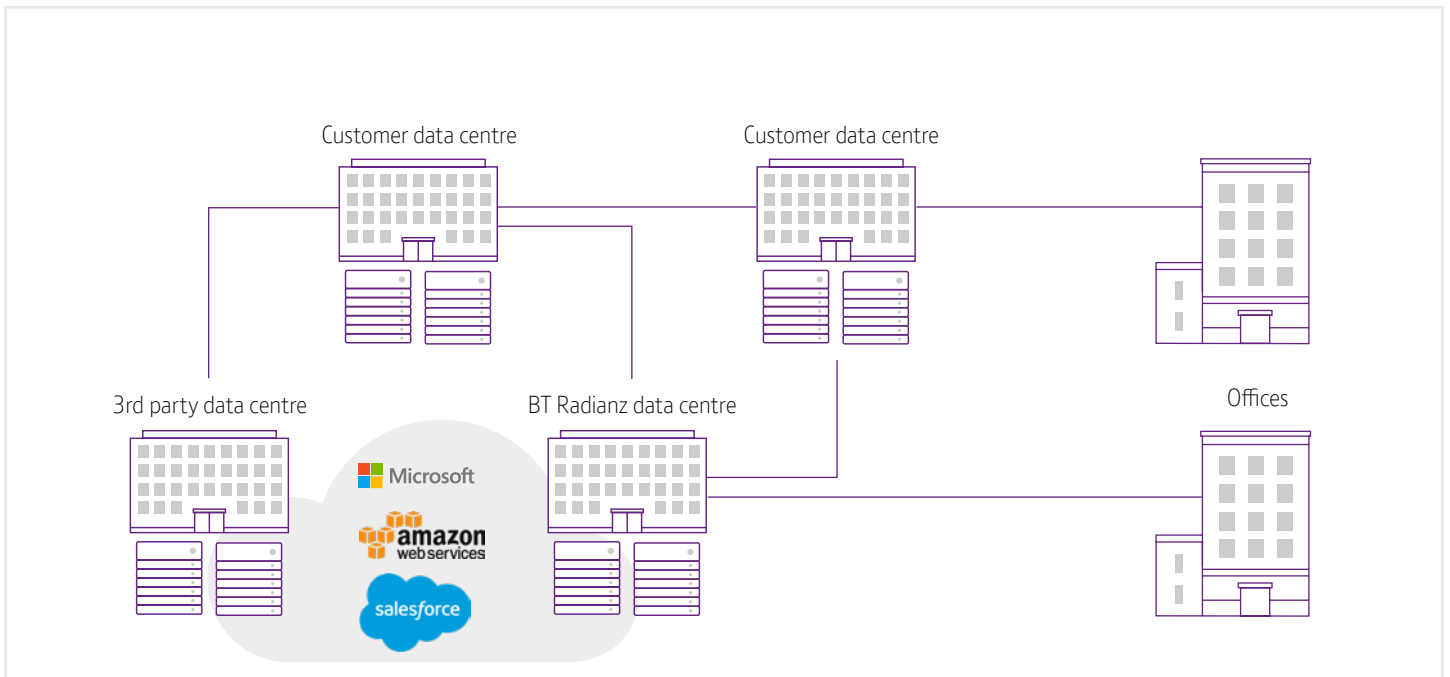

The BT Radianz Cloud Connect service can help make this happen by delivering connectivity between you and 3rd party cloud providers, like AWS and MS Azure.

BT Radianz Cloud Connect delivers secure, global access to public cloud services without the complexity of managing multiple suppliers. The Radianz network provides access to compute resources that let you build solutions to meet business needs and reduce your costs.

Get ahead in the cloud

- take advantage of cloud services to power your business
- simplified connectivity with the ability to access multiple cloud compute providers
- highly reliable connectivity with guaranteed levels of service availability
- wide range of solutions and price points to meet a wide range of requirements
- hybrid approach to meet a broad set of business challenges
- use your existing Radianz infrastructure to connect and take advantage of public compute resources
- lower your compute spend and investment in order to reduce business costs and TCO
- flexible capability to consume services while matching costs to business demands.

BT Radianz Cloud Connect offers a service that is simple, fast and reliable

BT Radianz Cloud Connect offers direct connectivity to leading 3rd party cloud providers

Connecting directly from the Radianz Cloud network allows you to access compute resources in a faster, more reliable and secure way. Multiple cloud providers are easily accessible through a single BT Radianz connection, giving you:

- consolidated infrastructure and delivery of multiple services through a single interface with easy turn-up of bandwidth as demand increases
- access to multiple cloud providers from over 20 global data centres
- high levels of performance and service availability provided by the BT Radianz Cloud network – removes the unknowns with multivendor or internet solutions
- bespoke managed hosting and cloud based solutions to meet your requirements delivered through BT Radianz
- secure, reliable service bandwidth that lets you consume virtual cloud-based products through your BT Radianz connection.

BT Radianz works directly with Cloud Computing partners to develop products and services specifically tailored for the financial services industry.

BT Radianz delivering 3rd party cloud computing

Flexibility
BT Radianz offers managed connectivity to cloud compute providers enabling you to have managed connectivity that seamlessly extends your compute environment. You can build a solution to suit your business requirements, with BT Radianz able to offer global public, hybrid and private cloud compute solutions.

Availability
Your cloud services are supported with connectivity that offers predictability, consistency and guaranteed performance. BT Radianz Cloud Connect offers 100 per cent availability as a fully managed service with industry leading 24/7 global support.

Cost-effective
You can access 3rd party cloud providers through your existing BT Radianz connectivity. Services can be delivered without the need for costly and complex infrastructure deployment.

Secure access
Network connectivity using BT Radianz Cloud delivers secure end-to-end access. It is a global service offered in multiple regions enabling you to access cloud compute resources regardless of location.

Simple, fast and scalable
Quick and easy service provision directly across the high performance BT Radianz network. Designed to be highly scalable, the BT Radianz Cloud Connect interface supports bandwidth up to 10G.
