

Accelerating cloud migration safely

Your business needs to be more flexible and agile than ever before. The cloud can help with this, but before organisations look to commit their applications and data to it, they need to be sure they have the right levels of security in place and can meet changing compliance requirements.

Together, BT and McAfee can help to protect your information at every step of the journey, from device to cloud. As well as being able to quickly spot and stop threats, your organisation will get a better understanding of how your employees are using the cloud – and be able to demonstrate accountability for data security.

In today's world, flexibility is paramount. The pandemic has accelerated digital transformation and highlighted the need for businesses to be able to move quickly and effectively in the face of uncertainty. But how do you get the freedom to move quickly while keeping security locked down tightly?

Moving to the cloud gives you agility, but it throws up a lot of challenges around security, especially around clear and explicit ownership and responsibility for data within organisations. With scarce cloud security experts, it can be hard to police your estate as flexible working increases and the security perimeter gets blurred. This lack of visibility and control can create data black holes and weak points – just the opportunity cybercriminals are looking for.

Only 30%

of executives say their organisation is excellent at using cloud computing while protecting security.

54%

of executives say they lose Intellectual Property and data when colleagues leave the organisation.

Identify threats and secure your data in the cloud with BT and McAfee

BT and McAfee help you to protect your information in the cloud, on the endpoint and at every step in between the two. We'll also help you apply persistent protection to sensitive information and take immediate action to correct policy or compliance violations.

By getting a better understanding of all aspects of cloud usage by your employees, you'll be able to quickly identify threats and policy breaches, and maintain accountability within your organisation for data security.

Stay protected with ongoing policy and incident management

As part of your managed service, our security experts can help you develop your information management policies and apply the necessary controls to protect new, unique and evolving risks to your data – whether intentional or accidental.

Drive security improvements with ongoing monitoring

We'll monitor and report on the performance of your service through a comprehensive online dashboard, detailing all the key metrics, tailored to your business. This close monitoring means we can spot issues and drive security improvements.

Our security operation centres (SOCs) are available 24/7, allowing constant access to dedicated, skilled and certified security experts. They provide strong experience in evaluating risk across all cloud platforms and can provide single policy and configuration management across multiple control points and clouds, helping customers transition across their digital transformation journey.

Our joint Managed Cloud Application Security solutions protect sensitive information from the endpoint to the cloud:

- **Secure Web Gateway** inspects and controls traffic from web sites so that sensitive information doesn't leave your organisation over the internet, and to protect against malware getting in.
- **Cloud Access Security Broker** inspects and controls cloud traffic, based on risk and security policies so that information held in the public and private clouds remains safe, and isn't visible to unauthorised audiences.
- **Endpoint Data Loss Prevention** ensures corporate sensitive information, compliance and intellectual loss prevention remains in place so you can protect data on the endpoint, ensuring that it is not inappropriately copied or reproduced.

Partner with us to combat cyberattacks

When you partner with BT and McAfee, you're tapping into years of experience in cloud security. We'll provide the skills, expertise, experience and global reach to manage and secure even the most complex solutions. Together, we give you:

Full peace of mind to ensure your systems are as safe as possible. We've invested heavily to create the very best security platforms for you, fully managed by our security experts.

Save money by not managing multiple vendors.

We take away the cost and complexity of managing multiple vendors so you can reap the benefits of cloud services safely, now and in the future.

Unrivalled expertise and understanding against the growing cyber threat. Our 3,000 global security experts help protect government agencies, critical national infrastructure (CNI) and large global companies against thousands of potential cyberattacks per day.

Best-in-class security. BT is rated as a leader in the IDC MarketScape: Worldwide Managed Security Services 2020 vendor assessment and McAfee MVISION Cloud is recognised as a market leader – and the only cloud access security broker named as “leader” in both major analyst reports produced by Gartner and Forrester.
