

Get a secure grip of your unstructured data

With the spread of cloud computing, mobility, the internet of things, social media and analytics, the growth in data is accelerating at an exponential rate. To keep up, you're in a constant race to update and migrate to new systems – adding further complexity and cost. And on top of that there's a forest of ever-changing regulations and compliance requirements to meet, with strict rules around ensuring your data securely stored, uncorrupted and easily accessible in the future. Our compute storage solution gives you the tools to handle the fast growth of unstructured data in a cost-efficient way, through your preferred data management software.

The use of unstructured data has become critical to almost every organisation. It's used to analyse customer profiles, behaviour and buying patterns, and to improve efficiencies and define strategies to boost the top and bottom lines.

There are tools available which can analyse these data sets to provide guidance and help you chart out your plans for growth. But just storing, maintaining and making the data available has become one of the most critical elements of IT. And it's a cumbersome and costly thing to try to manage in-house as you need to make sure your data can be stored securely and made available as and when required.

Our storage solution ensures you have demand control over local delivery, full data sovereignty, high levels of data durability – and assured end-to-end security to meet even the most stringent data management policies and compliance requirements. Compute storage comes with:

- a live platform available across five zones in four countries
- self-service portal to manage the platform
- accessibility through internet or private connectivity (ie MPLS etc)
- SLA of 99.95% availability
- 24x7 support desk for any issues.

Secure, scalable, cost-effective data management

- **End-to-end security.** Accessible through FQDN and SSL encryption from the user interface to the application and physical storage.
- **High data durability.** 99.9999999% data durability through automatic replication of objects.
- **Data sovereignty.** Choice and control over data location throughout the contract cycle
- **Compatibility.** Industry standard S3 Protocol working with thousands of applications.
- **Cost-effective.** Pay-as-you-go pricing (no capex).
