

# Coordinate your entire endpoint security from a single cloud console

The increasing number of endpoint devices attaching to your network gives cyber criminals more opportunities to infiltrate. The endpoint device, whether it's a laptop, tablet, or server, is your first line of defence. And in today's dynamic threat landscape, speed counts. The longer an attack is undetected, the more complex and expensive your response becomes. Our Managed Endpoint Security solution combines machine learning and artificial intelligence with next generation antivirus technologies to provide unparalleled endpoint visibility and protection – making it faster to detect, investigate and respond to threats.

By constantly monitoring activity at the endpoint, capturing hundreds of events in real time using a lightweight agent and applying security policies, we'll keep your business safe. We've partnered with CrowdStrike and Microsoft, the leading providers of endpoint solutions, to deliver our managed service.

Our artificial intelligence (AI) guided security management will also help deliver more accurate policy updates and fewer misconfigurations to help improve the overall health of your security system. And we can integrate with your existing investments, through seamless interoperability with a number of security technologies, including Forescout's Network Access Control service, Zscaler, and Security Information and Event Management (SIEM) solutions from a broad base of security providers.

---

“The average time to apply, test and fully deploy an endpoint software patch is 97 days which could leave you exposed and open to attack for over 3 months”

2020 State of Endpoint Security Final

## A smarter, simpler way to manage endpoint security

- Drive more accurate, intelligent and faster insights with AI-guided security management from a single cloud-based dashboard.
- Manage complete endpoint security from a single cloud console to reduce endpoint security management complexity.
- Get rapid updates through a “single agent” architecture simplified design.
- Eliminate routine tasks and enhance endpoint security decisions through simplified workflows with context aware recommendations.
- Our managed solution not only detects a problem, but also remediates, maximising protection of your IT environment.

# A comprehensive endpoint detection and remediation security solution

## Managed Endpoint CrowdStrike

Managed Endpoint CrowdStrike is enhanced by Eagle-i, our transformational cyber defence platform for predicting, detecting and preventing cyber threats. One of the challenges with modern endpoint solutions is the high number of alerts generated.

With our enhanced service we automatically consume all the endpoint alerts into Eagle-i and correlate them with contextual threat intelligence to remove false positives, before automating the initial remediation steps and handing over a set of prioritised alerts to you. We'll take the most appropriate actions to ensure we identify and auto-remediate incidents, including isolating endpoints where appropriate until required actions are taken.

### Key features of Managed Endpoint CrowdStrike include:

- enhanced by Eagle-i, the perfect fit security platform
- an automated hunting engine, processing 135m Indicators of Attack (IOA) decisions/min, 3 trillion events/week, tracking 130 active adversaries
- an expert, managed threat hunting team, vigilantly monitoring, 24 x 7
- a cloud native, simple architecture, lightweight single universal agent. No capital expenditure
- detect emerging threats and new vulnerabilities using regularly updated threat intelligence.

## The new 'benchmark standard' in endpoint protection

Industry analysts Gartner, Forrester and IDC place the CrowdStrike solution as a clear leader over several years, including the most recent evaluation reports in 2021.

## Managed Endpoint Microsoft

Managed Endpoint Microsoft from BT is our comprehensive managed security service wrap for Microsoft Defender for Endpoint.

As an existing Microsoft Defender for Endpoint licence holder, you will already have the extensive features at your disposal, but you may be considering how to maximise on your investment to ensure you stay ahead of the threat landscape.

### Key features on Managed Endpoint Microsoft include:

- 24x7x365 monitoring of your Microsoft Defender for Endpoint estate which provides round the clock cyber threat protection for every endpoint connecting to your network
- skilled analysts in our dedicated SOCs
- fine tuning of rules to minimise false positives and maximise threat hunting effectiveness
- dedicated reporting that helps you demonstrate regulatory compliance
- expert knowledge of Kusto Query Language ensures effective data analysis
- choice of service level.

Microsoft has been consistently positioned as leader in the Gartner Endpoint Protection Magic Quadrant, as well as other analysts including IDC and Forrester.

## Why choose BT?

Our breadth and depth of experience as one of the world's leading security brands, with decades of experience in the field, is built on:

- having one of the largest security and business continuity practices in the world with over 3,000 security professionals
- monitoring customer devices around the clock from our 13 global SOCs which are accredited and audited variously to industry and government information assurance standards
- being recognised by analysts for delivering outstanding Managed Security Services globally.

We provide managed security services to customers all over the world and have the technology and intelligence to spot and tackle cyber threats before they become the stuff of headlines.

The expertise that comes from the many years of defending ourselves, has allowed us to develop the unique tradecraft that we use to secure our customers. We want you to join us so you will be protected too.
